Associate Product Manager who owned Carfax's first agentic AI product from 0 to 1, turning partner needs into specs and shipping with engineering. Worked across product and development at startups, including a seed-stage marketplace.

EDUCATION

Bachelor of Science, Specialization in Computer Science **Expected April 2027**
Western University, London, ON

EXPERIENCE

CARFAX Inc.
Associate Product Manager April 2026 – Present

- Led Carfax's **first agentic AI product from 0 to 1** with Mobility Global, a prospecting and buying tool for used-car sales managers, leading a **20-person** cross-functional team across product, engineering, ML, and UX at two organizations.
- Interviewed users and found open-ended chat was driving churn, then redesigned onboarding around guided prompts and clear capability limits and set a three-phase roadmap to grow dealer usage and extend contract lifetimes.
- Made the quality and speed trade-offs: set a **UX-first latency budget** after diagnosing slow agent responses that threatened retention, and gated each phased release on an **LLM evaluation framework** built from realistic dealer scenarios, so launches only shipped when answer quality held.
- Drove cost and architecture decisions, including **model routing** that sends simple requests to a lightweight model and complex reasoning to a premium one to cut projected inference costs, and a prototyped **3-agent design** (vehicle history, market data, recommendation) that improved accuracy and reduced hallucination versus the single-agent version.

CARFAX Inc.
Data Product Analyst (Co-op) – Data Insights & Governance September 2025 – April 2026

- Supported a vehicle **fraud detection program** across banking, insurance, consumer, and government channels, validating rule test data that helped cut the false positive rate **from 48% to 20%** and building the business case for **two new detection rules**.
- Designed and validated a fraud rule by profiling confirmed fraud cases in **SQL** against **10 years** of history, raising flagged-case volume **15%** while cutting false positives **14%** through threshold back-testing.
- Turned usage analytics into product decisions: built **10+ Power BI dashboards** on **35B+ records** that segmented accounts for targeted sales outreach, and adoption analysis that informed roadmap changes lifting engagement **22%** and reducing churn **9%**.

HIVO Inc. (Seed-stage startup)
Product Owner (Part-time) December 2025 – March 2026

- Partnered directly with the founder to launch a two-sided coworking marketplace in Toronto and Halifax, redesigning host onboarding to grow **host inventory 45% and activation 30%**.
- Led MVP scoping and backlog prioritization across engineering, design, and business, delivering an investor-ready product that helped **secure $250K in seed funding**.
- Researched market utilization of generative AI and designed a **Generative AI Listing Assistant** that cut new-host listing time-to-live by an estimated **40%**, enabling non-technical coworking operators to publish market-ready listings in minutes.

PROJECTS

UMDB (Creative Social Platform, Startup) - Software Developer / Growth May 2026 – July 2026

- Shipped **4+ features** (AI chatbot, Creative Project Board, community voting, monetization) using React and Next.js for 5,000+ users; drove a **20% week-over-week increase** in new users via a launch campaign featuring competitions and early-user badges.

Encore Financial (Financial Services AI) – AI Software Developer June 2025 – August 2025

- Built an AI research platform (Python, vector database, Claude API) that automatically collects reports from 25+ financial institutions and lets analysts generate summaries, cutting manual research time **80%** for a team advising **100+** clients.

SKILLS

- **Product & Strategy**: Product Strategy, Market & Customer Research, User Interviews, Go-to-Market, Agile, MVP Scoping
- **AI/ML & Agents:** Agentic Systems, LLM Evaluation, Prompt Design, RAG, Multi-Agent Orchestration, Security & Guardrails
- **Analytics & Data:** SQL, Python, Power BI, Tableau, Snowflake, Azure Synapse
- **Tools:** Confluence, Jira, Figma, Excel, Claude Code, Cursor, Google Analytics, N8N
